Subject: RE: exploring business

Lee,

Of course I still want to be your scientific adviser. Here are two resumes, one civilian and one just military. You can use either, both, take bits and parts, what ever you want. I also attached a news release from back in DEC 2010 just before I went off active duty and back to the reserves. It was an announcement of my Bronze Star Medal. You might want to mention that when I was the toxicology adviser to the NATO/ISAF Chief Medical Officer I was tasked with providing information to all the NATO Alliance troops on what poisonous species of reptiles, insects, arthropods and plants that the soldiers in the field might come in contact with.

I am trying to find someone that can help us with a grant application. I will keep you posted.

Mitch
